

### About Community Lifestyles

Community Lifestyles supports adults and young people with disabilities and long-term conditions in Glasgow. Good support is essential for a good life and we work alongside each person we support, and their family, to help them live life to the full.

Critical to our ability to provide good support is having a skilled and committed workforce which feels respected and valued. With that in mind, Community Lifestyles seeks to ensure that all employees are given equal opportunities in training and advancement.

### What is the Gender Pay Gap?

The gender pay gap is defined as the difference between the mean or median hourly rate of pay that male and female colleagues receive.

The **mean** (average) pay gap is the difference between average hourly earnings of men and women. The **median** pay gap is the difference between the midpoints in the ranges of hourly earnings of men and women. It takes all salaries in the sample, lines them up in order from lowest to highest, and picks the middle salary.

### Our workforce

The data used for our results were taken from our payroll on the 'snapshot' date of 5 April 2021 in relation to the hourly rates of 541 workers paid on that date.

Based on the snapshot date, the gender profile of our workforce is 61.4% women and 38.6% men. A majority of women within a social care workforce is typical.

## Headline gender pay gap figures

In Community Lifestyles, our mean gender pay gap is 2.49%. Our median pay gap is 0%.

|                       |       |
|-----------------------|-------|
| Mean Gender Pay Gap   | 2.49% |
| Median Gender Pay Gap | 0%    |

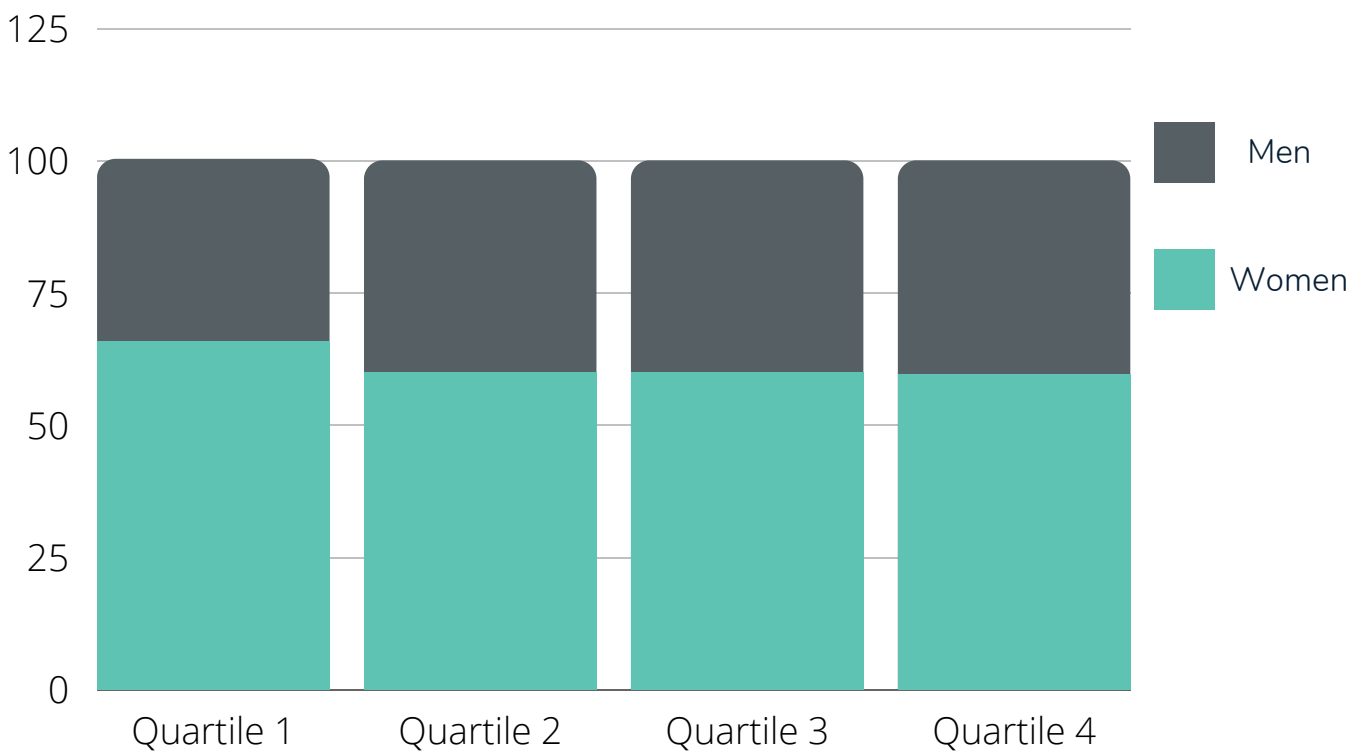

To provide some context, the mean gender pay gap across the UK is 15.4 % (Office of National Statistics Annual Survey of Hours and Earnings: 2021) so the gap in Community Lifestyles compares very favourably but why do we have a gap at all? The following statistic may provide some indication.

## Proportion of men and women in each pay quartile

If we list our workforce from lowest to highest hourly rate of pay and divide them into four sections or quartiles with the same number of workers in each, we see the following proportion of men and women in each.

| Quartile    | Female | Male  |
|-------------|--------|-------|
| 4 - highest | 59.6%  | 40.4% |
| 3           | 60.0%  | 40.0% |
| 2           | 60.0%  | 40.0% |
| 1 - lowest  | 65.9%  | 34.1% |

### Percentage of women & men in each quartile

These figures show that we have a majority of women across all 4 quartiles with a relatively similar proportion of women to men in each of the top 3 quartiles. However, the proportion of women to men in the lowest quartile is significantly higher and this is sufficient to create a pay gap.

#### What can we do about the gap?

We are aware of the gap and what lies behind it. Although the proportion of men in our workforce is significantly higher than many other social care organisations, we will continue our efforts to redress the gender balance at all levels by encouraging more men into our workforce. We will also continue to review our recruitment, selection and development practices to ensure there are no hidden obstacles to women moving into promoted posts.
